

A snapshot of HIV and AIDS in Iowa

As of the end of 2011, 1,939 Iowans were known to be living with HIV or AIDS. Some 500 more are believed to have HIV but have not been diagnosed.

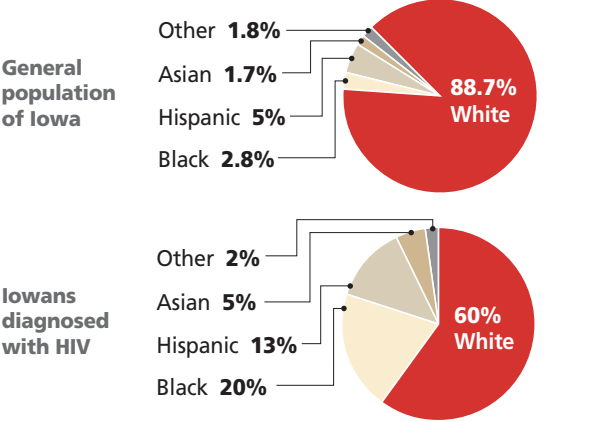

HIV DIAGNOSES IN IOWA BY AGE

While diagnoses among people ages 25 to 44 accounted for most diagnoses in Iowa, HIV diagnoses have been gradually increasing among people ages 13 to 24, especially males. Nationwide, one in four new HIV infections occurs in that age group — about 1,000 per month as of 2010.

RACIAL DISPARITIES IN IOWA

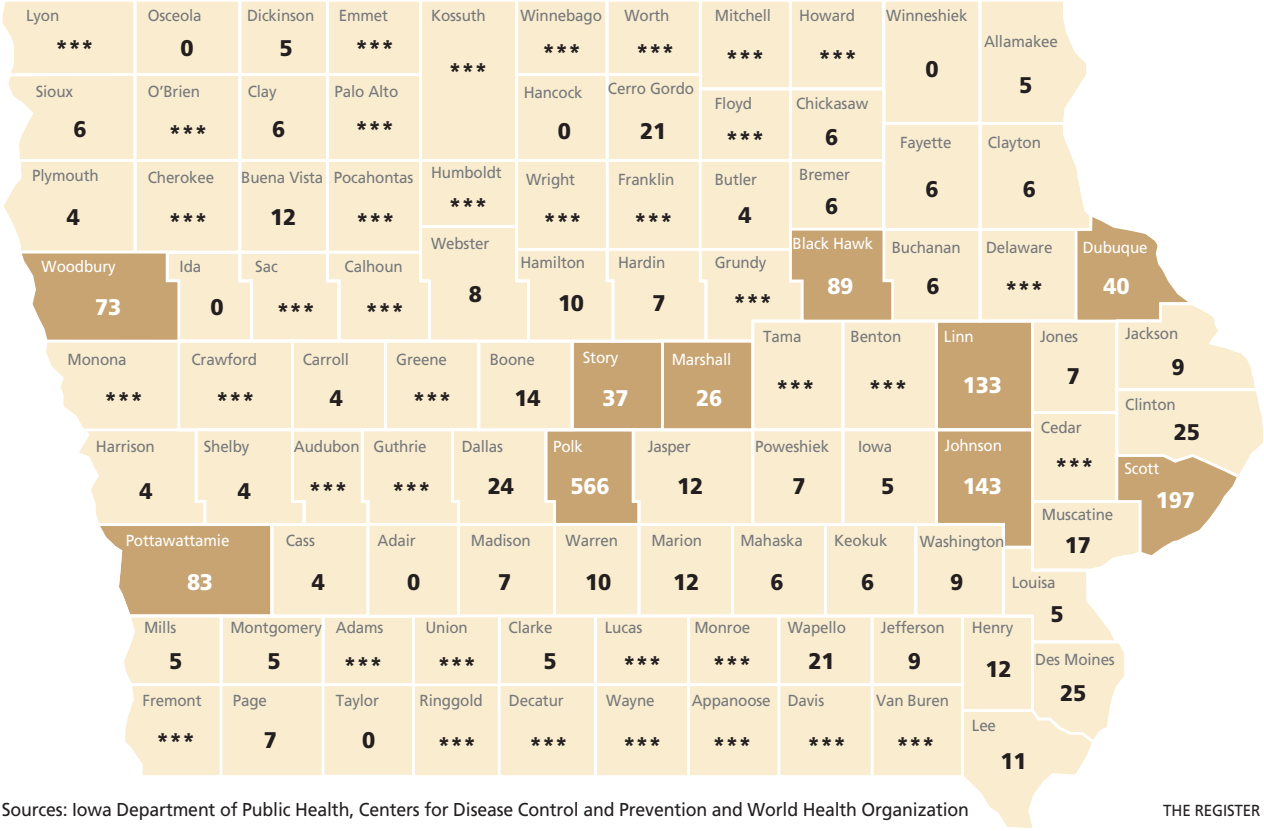

Although the black population of Iowa is just 2.8 percent, the community is disproportionately affected by HIV/AIDS, with 20 percent of all diagnoses in 2011.

IOWANS LIVING WITH HIV/AIDS BY COUNTY

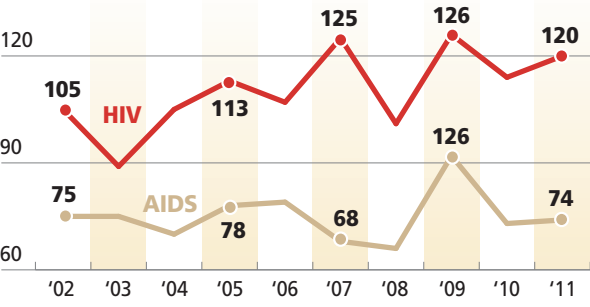

This map shows the number of people living with HIV or AIDS as of Dec. 31, 2011, a total of 1,939. It indicates where people resided at the time of diagnosis. Prisoners were diagnosed while being held in the following counties: Johnson (52), Jasper (5), Webster (2), Henry (2), Polk (3), Lee (1) and Page (1), a total of 66.

KEY: Top 10 counties with most number of diagnoses *** Indicates 1 to 3 cases
